

Energy Reduction Policy

Norican is committed - as part of its Environmental Policy - to reduce the consumption of natural resources through reviews of, and improvements to, building services and structures and to raise environmental awareness amongst all employees.

This Energy Reduction Policy is consistent with these aims.

Norican is committed to effective and efficient use of natural resources in order to provide suitable working conditions for all employees in both manufacturing and administrative areas. This commitment works alongside our aim of minimising operating costs and the effect of its operations on the local and global environment.

The aims of this policy are:

- To reduce the overall use of energy and water and thereby minimise Norican's contribution to atmospheric pollution.
- To maintain all building stock in good order and to ensure that all existing manufacturing plant and equipment, heating, lighting, and air conditioning is operating at maximum efficiency. When equipment is replaced, preference will be given to the most efficient type available where this can be demonstrated to be economically viable.

Thomas Körmendi, President, and CEO Norican

Date: 25 August 2026

- To encourage a responsible attitude towards energy use amongst all employees.
- To ensure that building stock has an internal environment that is adequately heated, ventilated and lit at minimum environmental impact and financial cost.

The means of implementing the policy will be through a range of internal procedures that will be applied by Senior Managers, Line Managers and Supervisors.

Objective	KPI	Target
Improve energy efficiency	Energy consumption per production hour	Year-on-year reduction

The policy shall be regularly reviewed to ensure that it is current and reflects the changes in the nature and demands of our business.
